PROJECTS

"Hospital Management System" 2025

The Hospital Management System (HMS) is a comprehensive, web-based solution designed to streamline and automate the day-to-day operations of a healthcare facility. The system integrates multiple departments, including patient registration, appointment scheduling, billing, and staff information, ensuring improved efficiency, accuracy, and communication within the hospital. The primary goal of HMS is to enhance patient care and operational efficiency by reducing manual processes, minimizing errors, and optimizing resource allocation.

Language and Technology: Django (Python), SQLite.

"Expense Tracker" 2025-2026

The Expense Tracker is a full-stack web application built on the MERN stack (MongoDB, Express.js, React JS, and Node.js) that helps users record, categorize, and monitor their daily income and expenses. It provides features such as adding and deleting transactions, filtering expenses by category and date, and viewing a summary of total income, expenses, and balance through a clean, responsive dashboard. The application follows a RESTful API architecture, with the frontend built using React JS and the backend handling data storage and business logic through Node.js, Express.js, and MongoDB, offering users an efficient and intuitive way to manage their personal finances.

Language and Technology: MongoDB, Express.js, React JS, Node.js (MERN Stack).
